EDUCATION

BROWN UNIVERSITY: Computer Science and Art. GPA: 4.0 Providence, RI

ScB, Computer Science with a specialization in AI and Graphics

Class of 2027

- **Graphics:** Introduction to Computer Graphics, Advanced Computer Graphics, and Interaction Design
- **AI/ML:** Deep Learning, Computer Vision, and Machine Learning
- **Other:** Computer Systems, Discrete Structures and Probability

BA, Visual Arts

- Painting II, Drawing, Foundation Media, Studio Foundation

SARATOGA HIGH SCHOOL. GPA: 4.40

Saratoga, CA

Class of 2023

- Graduated with very high honors
- 4 time AIME qualifier
- FTC Robotics: 2023 WORLDS Inspire Finalists, 2023 Regional Inspire Finalists, 2022 WORLDS Inspire Finalists, and 2022 Regional Inspire Winners
- Emerging Artist Award, City of Cupertino: 2022 Platinum Winner and 2021 Gold Winner
- To Be Honest Art Contest Winner: Fall 2022

TECHNICAL SKILLS

- **Languages:** C/C++, Python, Java, HTML/CSS, React, SQL,
- **AI/ML Skills:** Tensorflow, PyTorch, Neural Nets, CNNs, Google Colab
- **Graphics Skills:** Rendering, Raytracing, Shaders, OpenGL
- **Systems Skills:** Databases, Distributed Systems, Multithreading, Concurrency.
- **Creative:** Figma, Lightroom, Premiere Pro, Audition, Photoshop, Illustrator, InDesign

EXPERIENCE

UNIPHORE: Artificial Intelligence Intern

Summer 2025

Uniphore bridges the AI divide between IT and business users by combining the simplicity of consumer AI with enterprise-grade security and scalability. I will be working within the Artificial Intelligence department of the Software Engineering Team.

- I built tools and created an agent that fastracks the process of finetuning an SLM. My solution reduced the time it took from more than 10 man weeks to under 10 hours
- The agent generates comprehensive questions about a domain, searches those questions, scrapes data for the most up-to-date answers, and feeds generated QA pairs into a finetuning software.

PANGAEA: Software Engineering Intern

Summer 2024

Pangea is a cybersecurity startup that provides companies with microservices to embed directly into their products. Pangea hopes to aid companies building API-first products by simplifying security for users

- I created an automated documentation software that extracts code from existing packages and generates comprehensive documentation for the company's documentation site.
- This solution streamlines the documentation process for the company, reducing turnaround time from 2-5 days to under 2 hours.

iBELIEVE.ai: Software Engineering Intern

2021-2022

iBelieve.ai is a startup that aims to bring AI/ML into the world of fashion by providing users with recommendations that are perfectly adjusted to their body type, style, skin tone, and more.

- I developed machine-learning models and utilized Python for data processing and web scraping to crawl through various e-commerce clothing stores to collect and catalog product information

ADDITIONAL INFORMATION

- Fencer on NCAA Division I Varsity Fencing Team
- Clubs: Women in Computer Science, Art for Service, Rewriting the Code
- Sports Photographer for Brown Athletics
- Manager of Brown Fencing social media
